

My Success Story

6/06/01

Dr. Singh MD

I am extremely pleased and appreciate the expert surgery you performed to reconstruct my very droopy eye lids. You made the operation very easy for me. My only memory is the minor nuisance of applying the cold pack on and-off for the three days to help speed up reduction of the swelling.

Three days after surgery I already noticed improvements in my peripheral vision. I noticed that when updating information in my computer, I no longer needed to tilt my head up and down to view the monitor when copying information from another printed source. Also, when driving at night I noticed a much improved increase in brightness of the road ahead. It is now only nineteen days after surgery and the peripheral vision improvements are still continuing and the remaining swelling is almost invisible.

An added and much appreciated bonus is my greatly improved facial appearance. In the morning when I look in the mirror to shave I no longer look like I am bored or still half asleep. People that are aware of my operation say that it made a very pleasing facial improvement.

Sincerely,
William C. Johnson
