

My Success Story

The Ptosis (lid surgery) was not painful at all. I was anticipating some trouble but there was none. After the swelling went down (after few days) I was feeling better & I can read longer now too. This is a definite plus. I want people to know the end result is ^{well} worth it. I didn't know that droopy lids have so much effect on your eyes and I'm glad I got the surgery done. I have full confidence in Dr. Singh.
